## **Existing Equipment Decommissioning and Disposal Plan**

Dailey and Wells shall be responsible for the removal, transportation and legal disposal of all unused Stakeholder owned Existing Legacy Radio System equipment, cabling, and antennas from existing shelters, dispatch centers, data centers, and tower facilities which are associated with the SAPSRS Project. On all Stakeholder vehicles which Dailey and Wells is contracted to perform radio installations, DWC shall be responsible for the removal of Stakeholder owned legacy subscriber radios, associated cabling, and antennas.

Decommissioning of the existing Legacy System must be carefully coordinated and planned with the City and other Stakeholders in order to minimize any associated user impact. A detailed Existing Equipment Decommissioning and Disposal Plan with associated Schedule will be developed and mutually agreed upon with the City of San Antonio and other Stakeholders. Decommissioning and removal activities will take place prior to SAPSRS Final System Acceptance and after SAPSRS Final System Acceptance per an agreed upon schedule. SAPSRS Final System Acceptance is not dependent upon complete removal of Legacy System equipment. No existing Legacy System equipment will be decommissioned and removed without Stakeholder approval.
