Urban Forest Inventory and Analysis in San Antonio

City Council A Session
Roderick J. Sanchez, Director
Development Services Department
January 19, 2017

Background

- DSD has coordinated and implemented policies and ordinances aimed at ensuring a well maintained tree canopy
- A comprehensive tree inventory is necessary to monitor the tree canopy

Background

- Previous analysis of tree canopy utilized technology that provided aerial imagery from the 'top down' only
- The Urban Forest Inventory and Analysis (UFIA) provides more detailed data on the actual species, sizes and condition of the trees

Process

- UFIA is conducted by Texas A&M Forest Service (TFS) and U.S. Forest Service (USFS)
 - TFS collects measurements through a tree survey to determine the tree inventory of the urban forest
 - USFS compiles data and helps with analysis

Analysis

- Will report on:
 - Tree species, size and distribution
 - Tree damage, potential risk of insects/diseases
 - Tree impacts on storm runoff
 - Air pollution removal
 - Quantify and provide values of the benefits and services that urban trees provide

Analysis

- Continuous tree inventory system, not a “snap-shot in time”
 - Guide preservation and planting needs
 - Help in planning and budgeting for affected city departments

Outcome

- After the initial inventory is complete, 10% of plots will be sampled each subsequent year
 - Inventory is updated annually
 - Measure change over time
- Citizens and staff will be able to download data and summary tables, access reports, or run custom queries

Fiscal Impact

Funding in the amount of \$150,000, will be allocated through the Tree Mitigation Fund and Tree Canopy Investment Fund

Recommendation

Staff recommends approval of the implementation of the Urban Forest Inventory and Analysis.

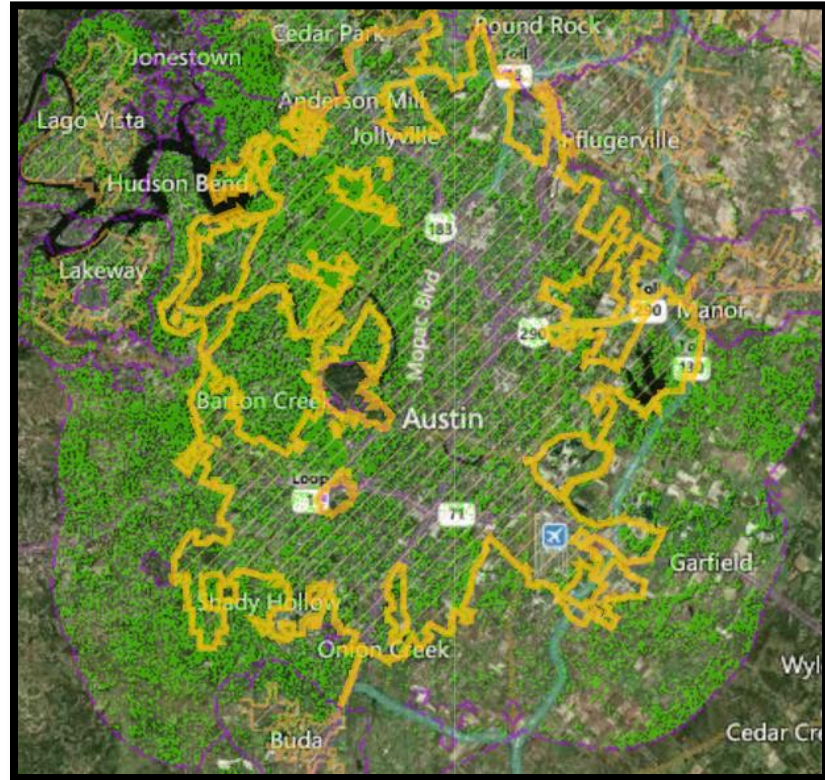

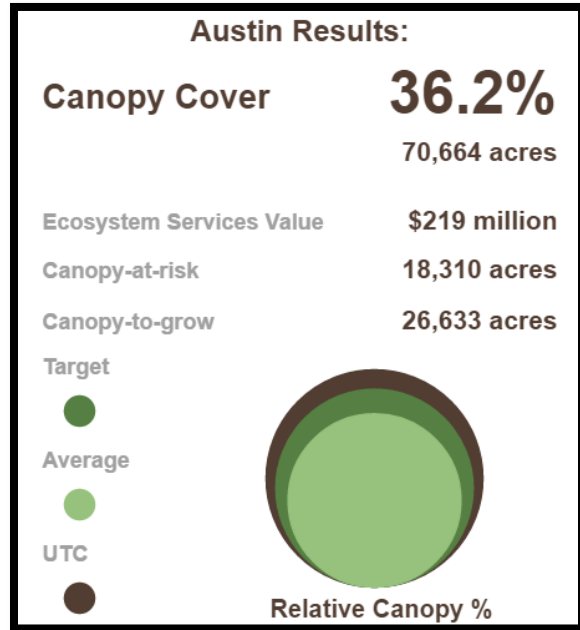

City of San Antonio, Texas

Urban Forest Inventory and Analysis in San Antonio

Presented by
Roderick J. Sanchez, Director
Development Services Department
January 19, 2017

Austin Urban Tree Canopy

Outcome

- City of San Antonio data will also be available on the easy-to-use “My City’s Tree” application.
 - New web application that is the national model for presenting Urban FIA data spatially and can be accessed at www.texasforestinfo.com.
- Austin was the first city in the nation to implement the UFIA.
