003 BACKGROUND

The San Antonio Public Library (SAPL) changes lives through the transformative power of information, imagination, and ideas. SAPL serves the citizens of both San Antonio and Bexar County with 26 Library branches and the Central Library.

SAPL strives for the following:

- To be recognized as the premier resource for educational support, self-directed learning and advancing literacies
- Provide invaluable tools for building the community's prosperity
- Anticipate community challenges and respond with creativity and innovation
- Create a forward-thinking organization that maximizes the potential of each employee

SAPL understands the need and anticipated benefits that a new incident reporting management system would provide that improves the safety of library locations.

The department has identified the following gaps:

- Currently, the system does not provide the access controls to set permission levels for who can enter, view and manage incidents created.
- File Size and type limitations for supporting attachments/documentation – Only specific types of files can be uploaded to the system, and size is limited. Therefore an incident recorded using a camera phone, could not be uploaded for review
- The system does not allow for alerts and notifications to be sent to all Library staff for emergency preparedness.
- Data uniformity – The current solution is not designed for data uniformity. Inconsistent data reduces the accuracy of statistical reporting.
- System Performance –When the database exceeds a certain threshold of size the system performance suffers.
- The current solution is not capable of running dashboards, summary reports and detailed reports of service programs.
- The current solution is not capable of displaying comparison reports (e.g., year-over-year, month-over-month, etc.)
- The current solution is not scalable to meet future growth and expansion on demand; it is not able to add users, functions, and data.

The overall experiences with the current solution have prompted SAPL to seek a robust and comprehensive system to handle all the end user administrative functions of running and tracking incident reports.

004 SCOPE OF SERVICE

SAPL seeks proposals for an integrated library incident reporting system needed to track and report patron violations of library code of conduct policies.

This section details the scope of the project including the software and implementation services.

SAPL requires the selected respondent to not only implement the Incident Reporting System but also to deliver a suite of comprehensive services, which align with the City's vision of providing a world-class solution for the public libraries.

SAPL has identified the following items that will make up the Incident Reporting System:

- 4.1 Provide customer portal easily accessed via an intuitive web administration that is integrated with the primary case management System.
- 4.2 Provide all users with an Intuitive and easy-to-use interface to submit incidents.
- 4.3 Provide a role-based interface that allows different permissions and levels of access, as determined by the library.
- 4.4 Provide users the ability to configurable alerts and notifications to be sent to selected users for emergency situations.
- 4.5 Provide an audit trail for all actions being performed in the Incident Reporting System.
- 4.6 Provide search functionality to all users to search incidents that have been recorded in the system.
- 4.7 Provide a flexible report generator which allows staff to easily build and save database queries by combinations of user-selected fields and criteria but does not require any specialized SQL or another type of reporting programming experience.
- 4.8 Provide a dashboard view which can provide standard and customized statistics for high-level incidents reporting, locations of incidents and types of incidents and trend, which allows management to make informed data-driven decisions.
- 4.9 Provide a search functionality that is accessible through desktop interfaces.
- 4.10 Provide predictive search technology (autocomplete) that improves upon the traditional spell checker functionalities; the user sees search suggestions appear dynamically as they type, making it easy to adjust spelling as they construct their search.
- 4.11 Provide the ability to enter narratives of client progress, developments, concerns, etc. for both the overall case record and individual visit records.
- 4.12 Provide two separate environments for the database and the system functionality, including all staff modules and public interface:
 - 4.12.1 Test
 - 4.12.2 Production
- 4.13 Provide robust reporting capabilities with customizable, business-defined reports.
- 4.14 Provide the ability to create ad-hoc lists and reports using ALL database fields.
- 4.15 Provide a maintenance view for authorized non-technical users to allow for update and modification of forms and notices.

- 4.16 Provide the users with assistance in completing records, glossary definitions, workflow, or other information about the system or services.
- 4.17 Provide the users with window level help, field level help, error message help, hypertext linked help, and indexed help.
- 4.18 Complies with the detailed Requirements Traceability Matrix described in Attachment E.
- 4.19 Provides Cost Proposal information.
- 4.20 The proposed solution should comply with the COSA Technology Standards as described in Exhibit 8.

City shall provide Vendor advance written notice if such occasion arises.

In such event, City's written notice shall constitute acceptance of Vendor's bid and shall result in a temporary contract to provide goods and/or services until City Council considers and awards the contract contemplated in this solicitation. The total expenditure under the temporary contract shall not exceed \$50,000. The temporary contract shall begin on the date set forth in City's written notice and shall terminate when the total expenditure reaches \$50,000, or upon subsequent written notice from City, whichever shall occur sooner.
